I LEGISLATIVE AND REGULATORY FRAMEWORK

i Legislative and regulatory regime

Islamic finance has been developing rapidly in the UK for over a decade, and the government has taken a leading role in legislating for its development and promotion. The UK hosted the first standalone Islamic financial institution in the EU and, according to the latest Islamic Finance Country Index (2022), the UK is ranked 19th of 53 countries in terms of its overall Islamic finance offering. This puts it in first place in Europe, and in first place among non-Muslim-majority nations. The UK has a strong and proud tradition of openness and flexibility, which, combined with London's position as a leading international financial centre and the UK's significant Muslim population (around 6.5 per cent of the UK population, according to the Office for National Statistics), provides a strong foundation for growth. As a result of its standing, London has long been perceived as the Western hub for Islamic finance. Rather than regulating Islamic finance products with separate legislation, the UK's approach has been to adapt pre-existing legislation and regulations governing conventional financial instruments to cater for the structures commonly used in Islamic finance. In so doing, the UK's approach has been to ensure a level playing field for Islamic finance products and conventional instruments, and so the UK has proactively monitored and responded to any unequal treatment between the two by introducing remedial legislation and regulations. For example, as early as 2003, the government introduced special exemptions to stamp duty land tax to relieve the unintended double taxation charge that arose as a result of structures used by Islamic mortgages and was also quick to remedy the adverse tax treatment of *sukuk* to place them on a level playing field with conventional debt instruments. This approach leaves the application of Islamic principles as a matter of conscience for the parties concerned, reflecting both the lack of a single codified body of Islamic law and the fact that there are differences of opinion among scholars as to how Islamic principles should be applied to modern-day financial instruments. As discussed in more detail below, the English courts have taken an approach consistent with this in considering only English law (to the extent that this is the governing law of the relevant contracts) when ruling on disputes involving Islamic finance transactions.

The primary legislation that governs Islamic finance in the UK is set out in the Finance Act 2005 as amended by the Finance Act 2007. The Finance Act 2005 characterises Islamic finance transactions as alternative finance arrangements and takes a relatively straightforward

¹ John Dewar and Munib Hussain are partners at Milbank LLP. The authors would like to thank Rachel Tay for her assistance in the writing of this chapter.

approach to folding Islamic finance instruments into the conventional legislative environment. For example, anything described in an Islamic finance instrument as profit will be treated in the same manner as under the provisions of previous Finance Acts that deal with interest; this is particularly important when considering the tax treatment of Islamic finance instruments. Further, given that the Finance Act 2005 was generally aimed at bank financing with a specific focus on consumer financing, particularly Islamic mortgages, the Finance Act 2007 expanded the scope of the Finance Act 2005 to include *sukuk* (defined as alternative finance investment bonds (Section 53, Finance Act 2007)) with the intention of paving the way for the inaugural *sukuk* issuance by the government (discussed in more detail below) by responding to the anomaly created by previously not providing for the tax-deductibility of profit distributions under a *sukuk*, making it a more expensive way to raise finance when compared to a conventional bond with tax-deductible interest payments.

Prior to the introduction of the Finance Act 2007, an issue that arose in connection with a potential *sukuk* issuance by a UK issuer was whether, for the purposes of the Financial Services and Markets Act 2000 (FSMA), *sukuk* would be considered to be the equivalent of a conventional bond or of a collective investment scheme (CIS). The issue arose because *sukuk* contemplate the investment by an issuer of the issue proceeds received from *sukuk* holders in certain assets – these are all features of a CIS. Market practitioners had long taken the view that *sukuk* should be treated in the same manner as a conventional bond (with the investment in the assets being in satisfaction of *shariah* (not investor) requirements), but for such treatment to be given in the UK, an assessment would need to be made by the regulator in respect of each individual case – and this was clearly not a practical solution. The Financial Services and Markets Act 2000 (Regulated Activities) (Amendment) Order 2010 (2010 Order) introduced a number of amendments to clear up this issue and to confirm that *sukuk* should be regulated in the same manner as conventional bonds. The 2010 Order amended the Financial Services and Markets Act 2000 (Regulated Activities) Order 2001 to specifically state that alternative finance investment bonds are to be categorised as specified investments in the same manner as financial instruments that create or acknowledge indebtedness. The 2010 Order also amended the Schedule to the Financial Services and Markets Act 2000 (Collective Investment Schemes) Order 2001 to specifically exclude alternative finance investment bonds from the definition of a CIS, and introduced a new Section 77A, which created a definition of alternative finance investment bonds. This definition is consistent with that which was set out in the Finance Act 2007.

Notably, the 2010 Order made a number of consequential amendments to other legislation and regulations, including the Financial Services and Markets Act 2000 (Regulated Activities) Order 2001, the Financial Services and Markets Act 2000 (Carrying on Regulated Activities by Way of Business) Order 2001 and the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005. These amendments extend the scope of those regulations to include alternative finance investment bonds. The amendments illustrate a consistent approach taken by successive governments in treating Islamic finance as a subset of the universe of conventional financial instruments. This approach indicates that the Islamic finance industry will be held to the same standards as the conventional finance industry in the UK, and contracting parties should expect to be subject to the same levels of scrutiny from the English regulators and courts as their conventional peers.

ii Regulatory and supervisory authorities

The two principal authorities charged with the oversight of Islamic finance institutions (to the extent that such institutions perform regulated activities) are the Financial Conduct Authority (FCA) and the Prudential Regulatory Authority (PRA). The FCA is the conduct regulator with supervisory responsibility for Islamic finance in the UK, and all Islamic banks in the UK are required to be authorised and licensed by the FCA. The PRA holds responsibility for the prudential regulation of banks, building societies, credit unions, insurers and major investment firms, including Islamic banks in the UK. The FCA and the PRA each hold Islamic banks and financial institutions to the same standards of regulation as conventional banks, and Islamic banks in the UK are considered to be financial institutions for the purposes of the FSMA. Islamic banks are subject to sanctions and fines in the same manner as conventional banks. The FCA's and the PRA's approach to regulation can be summed up as 'no obstacles, but no special favours'.

Unlike certain other regulatory authorities, such as Malaysia's, the FCA does not have *shariah* scholars who review the *shariah* compliance of a product offered by an Islamic finance institution. Consistent with the UK approach of treating Islamic finance institutions in the same way as conventional firms, an Islamic finance institution would require authorisation to carry on regulated activities and must obtain the necessary permissions from the FCA in the ordinary way. However, an Islamic finance institution may need to provide additional information to the FCA in certain circumstances, such as the role, if any, that its *shariah* board performs in relation to operational and financial matters. In addition, UK regulatory bodies have stated that they intend to work with international industry bodies, such as the International Organization of Securities Commissions, which have their own Islamic finance initiatives. The UK's Financial Services Authority (which was the sole UK regulator prior to its split into the FCA and the PRA) also supported moves to develop common *shariah* standards by organisations such as the Islamic Financial Services Board and the Accounting and Auditing Organization for Islamic Financial Institutions (AAOIFI). While neither of these standards have been formally adopted in the UK (and therefore do not have any binding legal effect), they are certainly useful in identifying best practice.

Finally, financial transactions entered into with an individual and not otherwise subject to regulation under the FSMA may be subject to regulation under the Consumer Credit Act 1974 (CCA) unless such agreement is entered into wholly or predominantly for business purposes, or one of the other exemptions under the CCA 2006 applies.

II COMMON STRUCTURES

i Consumer finance

Shariah-compliant consumer finance providers in the UK currently occupy a niche space advancing funds to customers in the form of simple *murabahah* financing and offering deposit investments in the form of profit-sharing investment accounts based on the principle of *wakalah*. Prominent consumer finance banks in the UK include Al Rayan Bank, Gatehouse Bank and the Bank of London and the Middle East, which launched its own UK-licensed and *shariah*-compliant digital bank, Nomo, in July 2021, as well as branches of some well-known Middle Eastern banks such as Abu Dhabi Islamic Bank and QIB UK. In 2020, Alibra, a *shariah*-compliant digital bank with a focus on sustainability and values, was launched, suggesting an increase in *shariah*-compliant digital banks that address a wider range of consumers' concerns.

An interesting development in Islamic consumer financing has been the establishment in the UK of Beehive, a peer-to-peer financing platform that includes a *shariah*-compliant window. Beehive's *shariah*-compliant window uses commodity *murabahah* financing backed by the Dubai Multi Commodities Centre's Tradeflow commodities trading platform, which is based in the Dubai International Financial Centre (DIFC). If an investor wishes to invest in *shariah*-compliant transactions only, it can indicate that preference in its profile.

Beehive uses the Shariyah Review Bureau, which is licensed by the Central Bank of Bahrain, as its *shariah* board to review potential opportunities for investment. Any investments that are not approved as *shariah*-compliant by Beehive's *shariah* board are not made available to an Islamic investor: these are made available only to conventional investors. Assuming an investment is *shariah*-compliant, Islamic investors may place bids on the Beehive platform to enter into a financing with the end user in much the same manner as a conventional peer-to-peer lending platform. If successful in its bid, the Islamic investor then enters into a *murabahah* contract with that counterparty.

ii Home finance

The primary structures used in home finance in the UK are *ijarah* and an *ijarah* with diminishing *musharakah* structure, which contain many of the features of a conventional repayment mortgage. Under the terms of an *ijarah* mortgage, a bank purchases a property (with title in and to the property registered in the name of the bank) and leases it to the homeowner for a specified period. The homeowner gives an undertaking that, at the end of the specified period, it will purchase the property from the bank using the final lease payment, following which legal title is transferred to the homeowner, and title in and to the property is registered in the name of the homeowner. Under the terms of an *ijarah* with diminishing *musharakah* structure, the bank and the homeowner together purchase the property in proportion to the capital put forward by each of them. However, title in and to the property is registered solely in the name of the bank. The homeowner pays the bank rent for the use of that part of the property that is owned by the bank under the terms of the *musharakah*. The homeowner also makes periodic payments to the bank to purchase its remaining interests in the *musharakah* such that the bank's interest diminishes until the homeowner is the sole owner of the property. Once the homeowner has purchased all the bank's interests in the *musharakah* (and thus is the sole owner of the property), title in and to the property is registered in the name of the homeowner and the mortgage terminates.

Islamic banks in the UK also offer rent-only *ijarah* mortgage packages that contain features similar to a conventional interest-only mortgage. In this scenario, a homeowner pays a bank rent for that portion of the property owned by the Islamic bank through the *musharakah* term. At the end of the *musharakah* term, the homeowner is obliged to purchase all the bank's interests in the *musharakah* in one go.

Much of the growth in the *shariah*-compliant home finance market was facilitated by an amendment to the tax laws in the UK in 2003 that removed what had previously been a double charge to stamp duty land tax: once at the date of the joint purchase of a property by a bank and a homeowner (and registration of title in the name of the bank), and second at the date of the purchase by the homeowner of all the bank's interest in the *musharakah* (and registration of title in the name of the homeowner). This change in tax law is discussed in Section III.

iii Insurance

Insurance companies in the UK offer *takaful* products to Muslim customers using structures typical to the *takaful* market. As with many other facets of Islamic finance, London is seeking to become a hub of *takaful*, and the Islamic Insurance Association of London (IIAL) was launched in July 2015 with the aim of promoting that goal. Lloyd's of London is a founding member of the IIAL and launched an office in the DIFC in March 2015.

Friendly societies and other mutual insurance companies are potential vehicles that could be adapted to provide *takaful*. Friendly societies in particular have an affinity with *shariah* principles because all contributions to a friendly society are made voluntarily. Friendly societies have evolved in different ways over the years. Since 1992, most have taken advantage of the ability to incorporate, which allows them to undertake a defined range of activities. There would be significant challenges in establishing a new *shariah*-compliant friendly society because, to be authorised by the Financial Services Authority to carry on regulated activities in the UK, a friendly society would need significant amounts of regulatory capital. As a mutual institution, a friendly society does not have shareholders that might provide that capital. On the contrary, Section 5(2)(b)(i) of the Friendly Societies Act 1992 provides, in effect, that only members (or persons connected with members) can receive benefits from a society, and the converse of this is also generally held to be true, namely that a person cannot be a member of a friendly society unless he or she (or a person connected) receives insurance or similar benefits from the society.

iv Private equity investments

The leverage that private equity funds obtain in connection with investments normally presents an insurmountable barrier to entry for Islamic investors who, as a result, are unable to invest in conventional private equity funds. Fully *shariah*-compliant funds require tight restrictions on debt and the appointment of a full-time *shariah* supervisory board to approve individual investments and are expensive to establish. In June 2021, UK-based Ethos Invest launched a fundraising vehicle with the aim of becoming the world's largest *shariah*-compliant tech-focused private equity fund. However, the demand for these funds does not appear to be sufficiently high to make overcoming the clear obstacles economically viable and, as a result, the Islamic private equity space has not grown with any conviction. Opportunities exist in the synthetic feeder fund space in relation to specific identifiable investments, but this is yet to become a significant tool in the UK private equity market.

v Real estate investments

UK real estate is one of the most popular asset classes for both international and domestic Islamic investors. Local players Gatehouse Bank and 90 North Square have offered *shariah*-compliant real estate investment products to Islamic investors for a number of years. Its prominence is clear by the fact that Al Rayan Bank, the UK's leading Islamic bank, announced in 2022 that the expansion of their residential investment finance division and focusing on residential investments would be part of their strategic development going forward.

Real estate investments typically apply a *wakalah*, *mudarabah* or *musharakah* structure to invest in an underlying portfolio of real estate assets, as well as *shariah*-compliant real estate investment trusts. However, care must be taken around certain *shariah* red flags, including any terms of any underlying leases that may include late payment interest charges. For new assets that are yet to be rented, late payment interest can generally be restructured as a late payment administrative charge – an approach that is common in *shariah* structures. However,

with established assets (especially those held by conventional landlords), late payment interest may be embedded in the contracts, and amending such contracts is both impractical and undesirable. In this situation, the documents governing an Islamic investment typically provide that if any *haram* income exceeds a *de minimis* threshold (typically 5 per cent of the total income from the real estate assets), then those amounts should either be directed solely to a conventional coinvestor (if there is one) or otherwise to charity.

vi Investment funds

As noted above, the specific requirements of *shariah*-compliant investment funds (such as the requirement for a *shariah* supervisory board), the restrictions on any leverage that may be applied to investments in assets and the need for an annual *shariah* audit have meant that the UK has not seen a high number of *shariah*-compliant investment funds established. However, in December 2020, Schroders (a UK-headquartered asset manager) launched a *shariah*-compliant fund that has also integrated the growing drift of funds towards multi-factor investing and environmental, social and governance (ESG) principles. While many existing *shariah*-compliant funds have begun to integrate ESG principles, it is too early to tell whether Schroders' latest fund will be the first of many Islamic finance funds to launch in the UK. Nevertheless, in the past year we have seen Invesco start a *shariah*-compliant ETF, and, in July 2022, J O Hambro Capital Management launched a *shariah*-compliant fund in response to client demand. If these funds perform well, they could act as a catalyst for further growth in this area.

vii Other areas

The UK government became the first sovereign national government outside the Islamic world to issue a *sukuk* with Her Majesty's Treasury's £200 million *sukuk* issuance in June 2014. The *sukuk* was structured as a *sukuk al-ijarah* (being the simplest and most widely accepted Islamic finance structure) and pays out profits based on the rental income from three government-owned properties in lieu of interest. The £200 million sale was more than 10 times oversubscribed by investors in the UK, the Middle East and Asia, attracting orders of £2.3 billion. The interesting aspect of the structure is that it did not adopt the delegate model (the Islamic equivalent of a conventional bond trustee) but opted instead to replicate the structure used for UK government gilts. While a comparatively small issuance by the standards of the government, the *sukuk* was intended to act more as a marketing tool for the government in its push to promote the UK and London as a centre for Islamic finance. The success of the government's initiative to develop Islamic finance in the UK was shown in 2021 when the government issued its second sovereign *sukuk* of £500 million, which was sold to institutional investors in the UK, the Middle East and Asia with an oversubscription of 1.25 times.

Furthermore, in March 2015, UK Export Finance participated as guarantor of Emirates Airline's issuance of a US\$913,026,000 *sukuk*. The proceeds of the *sukuk* issuance were to be used to purchase four new Airbus A380-800 aircraft, which would become the *ijarah* assets. In addition to being the world's first *sukuk* supported by an export credit agency, what was particularly interesting about this transaction was that there was a lead time between the issuance of the *sukuk* and the Airbus aircraft being available for delivery. As a result, for the period between the issue date and the relevant aircraft delivery dates, the proceeds of issuance were invested in what were known as 'rights to travel' on Emirates aircraft. This was an example of the government seeking to promote Islamic finance in tandem with the interests

of British industry (the wings for the Airbus A380 are manufactured in Filton, near Bristol, and Broughton, in North Wales). It is also another example of alternative assets – the rights to travel – being used to underpin *sukuk*, and builds on the success of issuances by Axiata Telecom (which utilised airtime vouchers) and FWU Group (which utilised the intellectual property in computer program source code) of *sukuk* backed by alternative assets.

To level the playing field between Islamic and non-Islamic banking, in 2021 the Bank of England implemented an alternative liquidity facility (ALF) structured as a *wakalah*, which allows UK Islamic banks to meet their capital requirements in a *shariah*-compliant manner. Before its introduction, UK Islamic banks (which are unable to make use of liquid gilts or interest-bearing reserve accounts at the Bank of England) had been reliant on holding high stocks of cash at zero return, or high-yield and less liquid *sukuk*. These were both inefficient methods of meeting their capital requirements and subsequently hindered the development of UK-based Islamic financial institutions. The Bank of England's ALF officially began taking deposits from participating UK-based Islamic banks for the first time in December 2021, which has further strengthened the UK's role as the leading international financial centre for Islamic finance outside Muslim-majority nations.

The UK is also exploring introducing a *sharia*-complaint alternative student finance (ASF) product that would include a *shariah* certification process that is aligned with norms in the Islamic finance industry. In 2023, the government published its response to its consultation on the lifelong loan entitlement (LLE), where it affirmed its commitment to delivering an ASF product as soon as possible after 2025. The government is seeking advice from experts in Islamic finance and will give an update on ASF by late 2023.

III TAXATION

Reforms to tax law and regulation have led the way in terms of the accommodation of Islamic finance within the laws of the UK. In 2003, Parliament passed the Finance Act 2003, which introduced the concept of alternative property finance to cure the double charge to stamp duty land tax that had affected the Islamic mortgage market up to that point. Under *ijarah* and diminishing *musharakah* structures, there are effectively two sales of the property being financed: the first when the bank buys the property from the vendor, and the second when the homeowner completes repayment of the financing and buys the property back from the bank. Each of these purchase transactions previously gave rise to a charge to stamp duty land tax, which made the Islamic mortgage market prohibitively expensive. The Finance Act 2003 introduced specific exemptions for Islamic mortgages to ensure that they incurred only one charge to stamp duty in the same manner as a conventional mortgage.

The introduction of the various regulations to facilitate *sukuk* issuance in the UK between 2007 and 2010 also gave rise to a need to include changes to tax law on the basis that the most common structure used for *sukuk* (and the one used for the UK government's *sukuk*) is *ijarah* based on property. The Stamp Duty Land Tax (Alternative Finance Investment Bonds) Regulations 2010 fixed a point of confusion by clarifying that the exemption from stamp duty land tax that applies to a transfer of leases as part of an alternative finance income bond structure will not be denied on the basis of other provisions of those regulations that would otherwise deem such a transfer to be a grant for stamp duty land tax purposes (i.e., the exemption is extended to ensure that an *ijarah*-based Islamic finance instrument is treated in the same manner as its conventional equivalent). These regulations are further supplemented by the Alternative Finance Investment Bonds (Stamp Duty Land

Tax) (Prescribed Evidence) Regulations 2009, which prescribe the evidence that needs to be provided to Her Majesty's Revenue and Customs in relation to claims for relief from stamp duty land tax in these circumstances.

The common purpose of this legislation has been to allow Islamic instruments the same treatment as conventional ones by making a distinction between the transfer of ownership of land for the purposes of occupancy or other use and the transfer of a form of ownership of land that is intended purely to facilitate a *shariah*-compliant transaction.

IV INSOLVENCY

There are various structures that can be adopted for a *sukuk* that may affect how it is classified for insolvency, tax and regulatory purposes. A *sukuk* is, however, typically structured to have the same economic effect as a conventional bond and is treated as such for International Financial Reporting Standards purposes. To date, the treatment of Islamic finance instruments in insolvency remains untested in the UK. Further, no Islamic institution has filed for insolvency or any insolvency-related procedure in the UK, meaning that it is not clear how the English courts would treat any such situation. Whether a *sukuk* is treated as an equity or a debt instrument depends on the structure and the risks and rewards of the *sukuk*. In particular, whether the *sukuk* is asset-based or asset-backed could affect this analysis. Often it is the case that, from the originator's perspective, a *sukuk* is shown as a financial liability on its balance sheet because it retains control over the issuer entity. From the *sukuk* holders' perspective, the holding would need to be classified into certain categories, such as an instrument held to maturity or a loan and receivable. Legislation now provides that, where certain conditions are satisfied, the return paid to *sukuk* holders is tax-deductible by the issuer consistent with the treatment afforded to conventional bondholders.

However, the Financial Services and Markets Act 2000 (Regulated Activities) Order 2010 made certain consequential amendments to legislation necessitated by the inclusion of a new definition of alternative finance investment bonds. These included amendments to the Insolvency Act 1986 to broaden the scope of the definition of bond to include alternative finance investment bonds. This appears to indicate clearly that the intention of lawmakers in the UK is for *sukuk* to be treated in the same manner as conventional bonds, and from that we may extrapolate that in the event of insolvency under English law, *shariah*-compliant instruments would be treated in the same manner as their conventional counterparts. Much of this is based on the economic effect of those instruments as well as their legal form, but it is clear that there is no current intention for a separate insolvency regime to be introduced for *shariah*-compliant instruments.

V JUDICIAL FRAMEWORK

i Courts

As a general comment, *shariah* is not applied in the UK, and English law does not recognise *shariah* as a system of law capable of governing a contract, on the basis that English law does not provide for the choice or application of a system of law other than a system of national law. This is based on the Convention on the Law Applicable to Contractual Obligations 1980 (Rome Convention), which requires that a governing law of an agreement must belong to a country (see below on the *Shamil Bank* case). The English courts have, however, taken the (uncontroversial) view that they have jurisdiction to decide cases involving *shariah*-compliant

products and structures that are documented under contracts governed by English law. The main question that arises is how English courts – being courts in a non-Muslim jurisdiction – will address matters that concern *shariah* compliance. In particular, will English courts consider matters of *shariah* law in reaching a judgment?

The *Shamil Bank* case² looked at the question of a conflict of laws between English law and *shariah* law. The full facts of the case are not relevant to the discussion on this topic; what is important is the wording of the governing law clause in the agreements that were in dispute. That clause reads as follows: ‘Subject to the principles of the Glorious Sharia’a, this Agreement shall be governed by and construed in accordance with the laws of England.’

The defendants advanced a defence that, for the agreements in dispute to be enforceable, the above governing law clause required that they be valid and enforceable both in accordance with the principles of *shariah* and in accordance with English law.

The judge considered whether this gave rise to a conflict of laws point, noting that it is not possible for a contract to be governed by two systems of law. In rejecting the defendants’ claim and deciding that the relevant agreements were not governed by *shariah* law, the judge focused on the Rome Convention, which states at Article 3.1 that a contract ‘shall be governed by *the* law chosen by the parties’ [emphasis added] and which makes clear at Article 1.1 that the reference to the parties’ choice of law to govern a contract is a reference to ‘the law of a country’ [emphasis added].

In his ruling, Lord Justice Potter stated that *shariah* is a non-national system of law and agreed with the view of Mr Justice Morison in the original trial that the principles of *shariah* are ‘not simply principles of law but principles which apply to other aspects of life and behaviour’. As is noted in many articles and texts on Islamic finance, *shariah* is not a codified body of law; rather it is a collection of strands of jurisprudence developed by separate schools of Islamic thought, based on each school’s interpretation of the cornerstones of Islam: the Quran, the Sunnah and the Hadith. These interpretations are often not consistent and sometimes openly contradictory. As such, it is not clear how the reference to ‘Subject to the principles of the Glorious Sharia’a’ should be interpreted by a judge. As noted by Morison J in his original judgment in this case, ‘the application of [*shariah*] principles in relation to matters of commerce and banking were plainly matters of controversy’.

Potter LJ went on to consider whether, instead, the principles of *shariah* had been included in the disputed agreements as a matter of contract. In considering this point, the judge noted that:

The doctrine of incorporation can only sensibly operate where the parties have by the terms of their contract sufficiently identified specific ‘black letter’ provisions of a foreign law or an international code or set of rules apt to be incorporated as terms of the relevant contract such as a particular article or articles of the French Civil Code or the Hague Rules.

Potter LJ again cited the differences of opinion that are such a particular feature of Islamic finance and noted the lack of any specificity as to which aspects of *shariah* were intended to apply to the agreements in dispute. He therefore held that the principles of *shariah* were not ones to be considered by the court, and that ‘the validity of the contract and the defendants’ obligations thereunder fall to be decided according to English law’.

2 *Shamil Bank of Bahrain EC v. Beximco Pharmaceuticals Limited and others* [2004] EWCA Civ 19.

The *Shamil Bank* case has therefore set the standard under English law that the English courts will consider disputes under English law-governed *shariah*-compliant contracts as matters of English law to the exclusion of questions of *shariah*.

While speculative, it is worth considering whether the judge may have taken a different view as to the application of *shariah* to the contracts had the parties, as an example, specified that the *shariah* principles codified by the AAOIFI in its Shari'ah Standards should apply. AAOIFI's Shari'ah Standards represent one of the few attempts to codify *shariah* and is a standard set of principles to which most Islamic financial institutions elect to adhere.

The position in *Shamil Bank* is supported by the earlier *Symphony Gems* case,³ in which Mr Justice Tomlinson stated that 'it is important to note – indeed, in my judgment, it is absolutely critical to note – that the contract with which I am concerned is governed not by Shariah law but by English law'. This case involved some dispute as to whether an agreement that had been labelled a *murabahah* contract was, in fact, a *murabahah* contract, and therefore whether the agreement was *shariah*-compliant. That question had wider implications for the case, but as to the question of how an English court will review an English law agreement (whether or not it is expressed to comply with *shariah*), the judge continued: 'it seems to me that it is not of any relevance to the issues which I have to decide what are the essential features of a Morabaha [sic] contract . . . it is a contract governed by English law. I must simply construe it according to its terms as an English contract'.

While by no means a weighty corpus of precedent, the fact that there is case law available from the English courts provides comfort to international market participants as to the treatment of Islamic finance contracts that are, for the most part, governed by English law.

ii Cases

As well as the governing law issues considered above, another issue that has been considered by the English courts is whether a claim for *ultra vires* can be made on the basis that a contracting party (who is only permitted to enter into contracts that comply with *shariah*) entered into a contract that purported to be a *shariah*-compliant contract but that may, on its facts, be non-compliant with *shariah*.

The best-known case on this is *Blom Bank*.⁴ The facts of the case are, briefly, that Blom Development Bank SAL (Blom Bank) entered into a *wakalah* contract with The Investment Dar (TID), a Kuwaiti investment company. Under the terms of the *wakalah* agreement, Blom Bank was to be paid a return on its *wakalah* investment that purported to be linked to the profits of the underlying investment (i.e., profit amounts may be lower than anticipated (including zero) and are not guaranteed), but that, according to the terms of the agreement, provided for a fixed return. This meant that rather than taking an investment risk, Blom Bank took only an insolvency risk on TID. TID is a *shariah*-compliant investment company that is required by its articles to contract only in a manner that is *shariah*-compliant, with those articles stating 'None of the objectives shall be construed and interpreted as permitting the company to practice directly or indirectly in any usury or non-*shariah* compliant activities'. Blom Bank brought a case for summary judgment seeking the return of the principle amount

3 *Islamic Investment Company of the Gulf (Bahamas) Ltd v. Symphony Gems NV & Others Unreported*, 13 February 2002.

4 *The Investment Dar Company KSCC v. Blom Development Bank SAL* [2009] EWHC 3545 (CH).

invested plus all profit accrued. TID argued that the *wakalah* arrangement was not a true *wakalah* arrangement but rather disguised lending at what amounted to an interest rate. As this was specifically prohibited by TID's objects, the transaction was *ultra vires* TID.

What is important to note about this case is that no ruling was made on the question of *ultra vires*. Instead, the issue was declared to be unsuitable for summary judgment and referred as a matter for trial. What is equally interesting is that the judgment declared that if the contractual claim that Blom Bank had made against TID for payments due to it under the *wakalah* contract failed as a result of the *ultra vires* defence, a claim in restitution (which Blom Bank added to its appeal in response to the *ultra vires* argument) was likely to succeed. Blom Bank was awarded summary judgment for the principal amount it invested, with the question of *ultra vires* and whether Blom Bank had a claim for its profit left as questions for trial. This was because the question of *ultra vires* was one for expert determination at trial involving consideration of Kuwaiti law, being the jurisdiction of incorporation of TID. At the time of this case, TID was in considerable financial distress and, having been placed under the protection of the Kuwaiti Financial Stability Law, the case went no further.

What distinguishes the *Blom Bank* case from both the *Shamil Bank* case and the *Symphony Gems* case is the willingness of the court to consider issues of *shariah* compliance in front of an English court, albeit on the limited basis of the consideration of an *ultra vires* defence. As the *Blom Bank* case went no further, it does not provide a conclusive or even compelling guide as to how the English courts will consider issues of *ultra vires* and *shariah* compliance. However, one should also bear in mind that the judge was clear that, in his view, were an *ultra vires* defence to succeed, a claim for restitution would be successful. This may be read to confirm the view that English courts will consider English law-governed Islamic finance contracts as questions of English law only.

This approach was reaffirmed in a 2017 English High Court case.⁵ Dana Gas (an issuer based in the UAE) attempted to render its *mudarabah sukuk* unenforceable on a number of grounds, one of which was that the *sukuk* were not *shariah*-compliant. Although Dana Gas had sought to bring proceedings to adjudicate on this matter in the Sharjah Federal Court of First Instance, a number of the *sukuk* documents were governed by English law, and so Dana Gas also sought and obtained an interim injunction in the English High Court preventing the *sukuk* holders from declaring an event of default or dissolution event in relation to the *sukuk*. In its injunction claim, Dana Gas has referred to the *Ralli Bros* principle, which provides that an English law contract that requires performance of an act that is unlawful in the place of its performance will not be enforced by an English court. On 17 November 2017, the English High Court ruled against Dana Gas on all grounds.

VI OUTLOOK

The UK has been the most prominent non-Muslim jurisdiction that has sought to promote Islamic finance and has taken concrete steps both through legislation and government-led transactions to promote Islamic finance. On its website, the London Stock Exchange (LSE) boasts that over US\$50 billion has been raised through 68 *sukuk* issuances that have been listed on the LSE, and such securities can be admitted on either the Main Market, which is a regulated market under the UK Markets in Financial Instruments Regulation, or the Professional Securities Market, which is a platform reserved for professional investors and

⁵ *Dana Gas PJSC v. Dana Gas Sukuk Ltd & Ors* [2017] EWHC 2928.

which is not a regulated market. Further, several *shariah*-compliant institutions are listed on the Alternative Investment Market, enabling the purchase of *shariah*-compliant shares, and there are numerous *shariah*-compliant exchange-traded funds based on Islamic indices. The London Metal Exchange (LME) is also often accessed by Islamic banks as part of cash financing through *tawarruq* contracts.

London remains one of the world's premier financial capitals, and its expertise in creating complex structured finance products puts it in a strong position to be at the forefront of the development of Islamic finance globally. While no new Islamic finance-specific legislation is expected in the near term, the government has a track record of reacting to the demands of the market as they arise.

In terms of commercial and transactional developments, fintech is one of the main focus areas in finance at present, and Islamic finance is not immune to this trend.

Peer-to-peer financing and crowdfunding would appear to capture the very essence of Islamic finance, and the introduction of a *shariah*-compliant platform on Beehive and the latest *shariah*-compliant fintech in digital bank Nomo should be the first of a number of similar initiatives. Furthermore, in July 2022, the UK's first *shariah*-certified credit card, the Score Mastercard, was launched by DND Finance in a bid to service the estimated 100,000-plus Islamic finance retail customers in the UK.

The government has done its part to encourage Islamic finance through the issuance of two *sukuk*, which have paved the way for UK corporate issuers to follow suit. Organisations from the UK have also taken the lead on the global stage, with the Islamic Finance Council UK, Her Majesty's Treasury and London Stock Exchange Group all becoming founding members of a High Level Working Group on Green Sukuk (HLWG). The HLWG was launched in November 2021 to help global financial leaders meet their goal of unlocking over US\$30 billion of capital by way of green and sustainability linked *sukuk* by 2025. There can be no question that the legal system in the UK has been suitably adapted to facilitate the growth of Islamic finance, and so its future development in the UK looks very positive.
